L10: Entry 6 of 6

File: USPT

Jul 3, 2001

DOCUMENT-IDENTIFIER: US 6256676 B1

TITLE: Agent-adapter architecture for use in enterprise application integration systems

Brief Summary Text (11):

Data warehousing techniques require large volumes of clean historical data that must be moved, on a regular basis, from many operational systems into the warehouse. Source data is usually structured for online transactional processing (OLTP), while the typical data warehouse also accommodates online analytical processing (OLAP) formats. Therefore, the source data must undergo extensive aggregation and reformatting as it is transferred to the warehouse.

Brief Summary Text (17):

Electronic commerce in one form or another has been around for many years. In essence, it got its start with electronic data interchange (EDI). EDI permitted companies to communicate their purchase orders and invoices electronically, and continued to develop such that today's companies use EDI for supply chain management. However, not until the more recent exploding use of online Internet websites to buy, sell, and even auction, items of interest has there been such a dire need for robust, effective EAI. See, e.g., U.S. Pat. No. 5,627,972.
